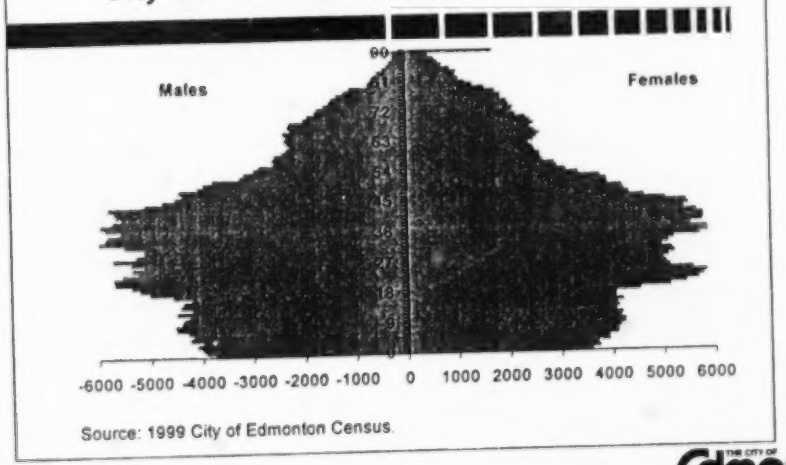
Edmonton Demographic Change, 1993 to 1999

The City of Edmonton 1999 Census provides demographic information about the City's residents and is used for planning purposes and to calculate provincial per capita funding. This report presents the census information at four geographic levels: the City, traffic districts (groups of neighbourhoods, Map 1), wards (Map 2) and neighbourhoods (Map 3 and insert map).

The City of Edmonton 1999 Census indicates that the City's population was 648, 284, an increase of 21,285 since the last civic census in 1993. This increase represents 3.4% over the whole period or an average of 1.13% per year. The trend of an aging population continues. The number of people aged less than 40 years decreased by 23,290 in this period and this age group's share of total population fell from 65% to 59%. The number of people aged 40 and over increased by 44,575, bringing this group's share to 41% (Table 1.2). A 'picture' of the shape of Edmonton's population age distribution is shown in Figure 1.

Figure 1:
City of Edmonton 1999 Population by Age



Source: 1999 City of Edmonton Census.

Edmonton's suburban neighbourhoods (built after 1969, Map 1) continue to grow. The population of these neighbourhoods grew by 29,440 since 1993 while the population of the inner city fell by 8,155 (Table 2.1). Most of the inner city areas had population losses with only the Beverly traffic district having increases of any amount. Of the suburban areas, the Lake District had the highest increase (6,400). Edmonton's south side experienced a population growth of 13,300 compared with the north side's increase of 7,985. Many neighbourhoods, both in the inner city and the suburbs, experienced population losses between 1993 and 1999 (Map 3). Some of this population loss is due to adult children leaving home. For example, some of the first neighbourhoods in Mill Woods were developed in 1973 and children living in those neighbourhoods would have been ready for independent living by the mid-1990s. Although the population of the inner city declined between 1993 and 1999, the number of households increased by nearly 1,800. The total number of households in the City increased by 16,252 reaching 260,158 while average household size fell to 2.49.

Nearly half (46%) of Edmonton residents lived at their address five or more years, 13% for three to four years, 23% for one to two years and 15% for less than one year (Table 2.3). No information is available for the remaining three percent of residents. Of those residents living less than one year at their 1999 address, 70% moved from elsewhere in Edmonton, and 16% moved from elsewhere in Alberta. The inner city and the suburbs have very similar percentages for length of residence. The traffic district with the highest percentage of residents living five or more years at their 1999 address was Capilano with 58%. Downtown had the highest share (31%) of residents living at their address less than one year.
